

ADU Market Technical Audit

California ADU Competitor Stack Analysis

PREPARED FOR	West Coast KBP — westcoastkbp.com
MARKET	Sacramento / Northern California ADU
COMPETITORS	12 California ADU companies audited
DATE	June 2026

Senior Technical Product Auditor · Frontend Architect · SEO Engineer · Lead-Gen Systems Analyst

TABLE OF CONTENTS

Section A Executive Technical Summary

Section B Competitor Technical Audit

12 companies analyzed in detail

Section C Stack Pattern Summary

Framework, CDN, analytics, CRM distribution

Section D Technical Gaps in the Market

7 confirmed competitive gaps

Section E Recommended Architecture — v0.1

Next.js + Vercel blueprint

Section F What NOT to Build in v0.1

Scope control guidance

Section G First Implementation Slice

8-week build plan

Section H Technical Roadmap

v0.1 → v1.5

Section I Sources and Evidence

All detected signals cited

Methodology Note: All stack data was gathered via HTTP header inspection, HTML source analysis, robots.txt, and sitemap parsing. Facts labeled [CONFIRMED] come directly from detected signals. [LIKELY] are reasonable inferences. [NOT DETECTED] means the signal was not found via source scan — it may exist but load dynamically. No stack details were invented.

SECTION A

Executive Technical Summary

The core finding: Of 12 California ADU competitors, only ONE (Abodu) runs a modern JavaScript framework (Next.js). The Sacramento / NorCal market has ZERO modern ADU portals. No competitor has an address-first intake, real client portal, or interactive lot-checking tool targeted at Sacramento. This creates a clear technical differentiation window for West Coast KBP's Next.js + Vercel platform.

Key Findings at a Glance

Signal	Market State	Implication
Modern JS framework (Next.js/Nuxt)	2 of 12 (Abodu, KGA)	Joins elite tier immediately
Vercel hosting	1 confirmed (LADU)	Same infra = same edge performance
Meta Pixel / FB attribution	1 confirmed (KGA)	Sacramento competitor has Instagram ads
GoHighLevel CRM	2 confirmed (KGA, Nestadu)	Standard pipeline tool — adopt now
HubSpot CRM	1 confirmed (Nestadu)	Advanced — defer to v1
Real client portal	0 confirmed	First-mover opportunity
Address-first intake	0 confirmed	Largest product differentiator available
Interactive lot checker	0 confirmed	Second-biggest differentiator
LLM/AI crawler access (llms.txt)	1 (LADU only)	Copy immediately — 30 min to implement
Broken/offline sites	2 (Fortune ADU, Nonna Homes)	Capture their branded search traffic

Sacramento Competitive Gap

Sacramento has three ADU companies with active web presence: GBG Construction (Wix, weak attribution), KGA Construction (Nuxt + GoHighLevel + Meta Pixel — the most technically capable local competitor), and Redwood ADU (Wix). None has an address-first intake, real client portal, or modern mobile-first UX. West Coast KBP can leapfrog all three with v0.1.

Primary local threat: KGA Construction (kgaconstruction.net) — Nuxt.js + Cloudflare + GoHighLevel + Meta Pixel. They have the best local tech stack and are actively running Facebook/Instagram ads. West Coast KBP must match their attribution setup immediately and exceed them on platform quality.

SECTION B

Competitor Technical Audit

12 competitors audited via HTTP header inspection, HTML source analysis, robots.txt, and sitemap parsing. Results separated by confirmed signals vs. inferences.

1. Abodu — abodu.com		NATIONAL BENCHMARK
Stack	Next.js [CONFIRMED] — __NEXT_DATA__ in source, buildId DMkgmUAMym9q7-vBjjJVz, App Router / CMS-driven route [...slug]	
Hosting/CDN	No server header exposed — [LIKELY Vercel or CloudFront] — no cf-ray, no x-vercel header detected	
GTM	Not detected via source scan [LIKELY loads dynamically]	
GA4	Not directly confirmed [LIKELY via GTM]	
Meta Pixel	Not detected [NOT CONFIRMED]	
LinkedIn Pixel	[CONFIRMED] — detected in source	
Schema.org	application/ld+json present [CONFIRMED]	
Maps	maps.googleapis.com [CONFIRMED]	
Sitemap	/sitemap.xml [CONFIRMED] — blog: adu-law, adu-investing, adu-cost, financing-grants, homeowner-stories, construction-installation, fire-rebuild	
Forms/CRM	Calendly [LIKELY — referenced in research, not confirmed in source]	
Client Portal	Not detected	
Strategic Note	Best-in-class stack nationally. Prefab/manufactured ADUs — different value prop from custom build. No Sacramento city page strategy. The technical benchmark to match.	

2. LADU — ladu.co		VERCEL — COPY THEIR LLM STRATEGY
Stack	Custom framework [CONFIRMED NOT Next.js from source]	
Hosting/CDN	Vercel [CONFIRMED] — server: Vercel, x-vercel-cache: HIT, x-vercel-id: iad1::...	
GTM	GTM-TRWJ2MBC [CONFIRMED] in source	
Meta Pixel	Not detected [NOT CONFIRMED]	
LinkedIn Pixel	[CONFIRMED] — detected in source	

AI/LLM Access	[CONFIRMED — UNIQUE] — robots.txt allows ClaudeBot, GPTBot, anthropic-ai; /llms.txt and /llms-full.txt exist. Only competitor doing this.
Sitemap	/sitemap.xml [CONFIRMED] — /about/investors, /adu-financing, /adu-rules, /prefab-adu, /areas, /design/2-bedroom-adu, /design/garage-adu, /design/junior-adu, /legalizing-unpermitted-adus
Client Portal	Mentioned in marketing materials but not confirmed from source
Strategic Note	Only competitor on Vercel. Forward-thinking LLM SEO with /llms.txt. Strong content architecture. COPY their LLM strategy on day 1 — 30 minutes to implement, permanent AI search signal.

3. SnapADU — snapadu.com

WORDPRESS — STRONG SEO DESPITE OLD TECH

Stack	WordPress + Divi theme [CONFIRMED] — Divi-Child theme, divi scripts in source
Plugins	contact-form-7, wp-rocket (caching), yoast SEO, supreme-modules-for-divi, addons-for-divi, add-search-to-menu, yith-infinite-scrolling, wpcf7-redirect [ALL CONFIRMED]
Hosting/CDN	nginx server [CONFIRMED] — cache-control: max-age=3600
GTM	GTM-K86RPXK [CONFIRMED]
LinkedIn Pixel	[CONFIRMED] — detected in source
Maps	maps.googleapis.com [CONFIRMED]
Sitemap	/sitemap_index.xml [CONFIRMED] — 10 sitemaps: floor_plans-sitemap, projects-sitemap, testimonials-sitemap, regulation_community-sitemap, community-sitemap + more
Forms/CRM	Contact Form 7 + wpcf7-redirect [CONFIRMED]
Client Portal	Not detected
Strategic Note	Floor plans sitemap = strong SEO signal. 10-sitemap structure shows serious SEO investment despite old tech. COPY their content taxonomy (floor plans as indexed pages), not their stack.

4. Vision ADU — visionadu.com

BEST SCHEMA.ORG IN MARKET — LA FOCUSED

Stack	Unknown framework (not WP/Wix/Next.js) — server: Google Frontend (App Engine or Cloud Run)
Hosting/CDN	Google Cloud (App Engine / Cloud Run) [CONFIRMED from server header]
GA4	G-EXY4F68N0Z [CONFIRMED] — gtag confirmed in source
GTM	Not detected
Meta Pixel	Not detected
Schema.org	HomeAndConstructionBusiness with full address/phone/email [CONFIRMED] + FAQPage with ADU cost questions [CONFIRMED] — MOST STRUCTURED SCHEMA of all competitors

AI/LLM Access	robots.txt explicitly allows GPTBot [CONFIRMED]
Sitemap	Multiple sitemaps — /sitemap.xml, /sitemap-index.xml, /sd/sitemap.xml, /homes/sitemap.xml; pages: /quiz, /timeline, /compare/garage-conversion-vs-new-construction, /compare/jadu-vs-adu, /service-areas/los-angeles-county
Interactive Tools	/quiz page [CONFIRMED in sitemap] — ADU qualification quiz
Client Portal	Not detected
Strategic Note	Best schema.org implementation in market. /quiz + /compare/ URL strategy + city pages = strong SEO architecture. COPY their schema pattern and compare page strategy for Sacramento.

5. Acton ADU — actonadu.com

WEBFLOW — VISUALLY STRONG, TECHNICALLY LIMITED

Stack	Webflow [CONFIRMED] — detected from source scan
Hosting/CDN	Cloudflare [CONFIRMED] — cf-ray: a100cc4dcaa23b5c-IAD in headers
GTM	GTM-WP35BHV [CONFIRMED]
LinkedIn Pixel	[CONFIRMED] — detected in source
robots.txt	Empty/none returned
Client Portal	Not detected
Strategic Note	Webflow is visually polished but technically constrained — no custom routing, no SSR, no edge optimization. Good design reference only. Cannot compete with Next.js on performance or SEO flexibility.

6. Maxable — maxablespace.com

WORDPRESS — SERVER-SIDE GTM SIGNAL

Stack	WordPress [CONFIRMED] from source
Hosting/CDN	Cloudflare [CONFIRMED] — cf-ray header, __cf_bm cookie
GTM	'gtm-server' string found — [LIKELY server-side GTM] — more advanced attribution
robots.txt	Empty returned
Strategic Note	Server-side GTM is a notable signal — suggests sophisticated attribution or privacy-first measurement. One of few competitors with potentially clean data pipeline. Not a direct NorCal competitor.

7. GBG Construction — gbgconstructioninc.com

WIX — SACRAMENTO — WEAKEST TECH, RUNNING ADS BLIND

Stack	Wix [CONFIRMED] — server: Pepyaka (Wix proprietary), preconnect to static.wixstatic.com, x-wix-request-id header
-------	--

Hosting/CDN	Fastly CDN [CONFIRMED] via Wix infrastructure
GTM	Not detected via curl
GA4	Not detected via curl
Meta Pixel	Not detected
Forms	Wixforms [CONFIRMED] in source
Google Ads	robots.txt explicitly optimized for AdsBot-Google [CONFIRMED] — actively running Google Ads
Strategic Note	SACRAMENTO COMPETITOR. Running Google Ads with no confirmed GA4/GTM = likely wasting ad spend with no proper conversion tracking. Wix is the weakest technical platform in this audit. Easy to outperform on every technical dimension.

8. KGA Construction — kgaconstruction.net

PRIMARY SACRAMENTO TECHNICAL THREAT

Stack	Nuxt.js + Vue.js [CONFIRMED] — nuxt, vue keywords in source, NUXT hydration pattern
Hosting/CDN	Cloudflare [CONFIRMED] — CF headers detected
GTM	GTM-T9W9XC2D [CONFIRMED]
Meta Pixel	fbq (Facebook Pixel) [CONFIRMED] — ONLY Sacramento-area competitor with confirmed Meta Pixel
CRM/Lead tools	GoHighLevel [CONFIRMED] — detected in source
Client Portal	Not detected
Strategic Note	KGA is the PRIMARY TECHNICAL THREAT in Sacramento. Modern stack (Nuxt/Vue), GoHighLevel CRM, Meta Pixel for Facebook/Instagram ads. West Coast KBP must match their Meta Pixel + GoHighLevel pipeline immediately, then exceed with Next.js performance + address-first intake + city page SEO.

9. Redwood ADU — redwoodadu.com

WIX — SACRAMENTO — WEAK ATTRIBUTION

Stack	Wix [CONFIRMED] — same Pepyaka/wixstatic headers as GBG Construction
Hosting/CDN	Fastly CDN [CONFIRMED] via Wix infrastructure
GA4	G-GZ2KC5PZ9Q [CONFIRMED] — direct GA4 embed (no GTM = no custom event tracking)
LinkedIn Pixel	[CONFIRMED] — detected in source
Meta Pixel	Not detected
Client Portal	Not detected

Strategic Note	SACRAMENTO COMPETITOR. Wix with direct GA4 but no GTM = limited conversion data. LinkedIn pixel suggests B2B/investor targeting. Technically limited — no meaningful lead attribution pipeline.
----------------	---

10. Nestadu — nestadu.com

MOST INSTRUMENTED WORDPRESS COMPETITOR

Stack	WordPress + Elementor [CONFIRMED] — hello-elementor theme, elementor + addon-elements plugins
Hosting	WPX Cloud [CONFIRMED] — server: WPX CLOUD/NY01, PHP/8.0.30
GTM	GTM-PJQ7HVWN [CONFIRMED]
GA4	G-7RNDHJMLYE [CONFIRMED]
Microsoft Clarity	[CONFIRMED] — session recording + heatmaps. Only competitor with confirmed Clarity.
LinkedIn Pixel	[CONFIRMED] — detected in source
CRM/Lead tools	HubSpot [CONFIRMED] — hbspt.forms + _hsq in source; GoHighLevel [CONFIRMED] — calendar booking
Forms	HubSpot forms + GoHighLevel calendar [BOTH CONFIRMED]
Client Portal	Not detected
Strategic Note	MOST INSTRUMENTED competitor. GA4 + GTM + Microsoft Clarity (behavioral data) + HubSpot (email/CRM) + GoHighLevel (pipeline). Serious lead-gen operation on old tech. West Coast KBP should match this instrumentation depth on a better technical foundation.

11. Fortune ADU — fortuneadu.com

COMPLETELY BROKEN — COMPETITIVE OPPORTUNITY

Stack	Apache server + WordPress [CONFIRMED from HTTP headers before DB error]
Status	COMPLETELY BROKEN [CONFIRMED] — Database connection error returned on ALL pages including /robots.txt
Analytics	Cannot detect — site returns error HTML
Strategic Note	Active competitive opportunity. Any homeowner searching for Fortune ADU lands on an error page. West Coast KBP city pages could capture those branded searches. If they're running ads to a broken site, they're wasting budget.

12. Nonna Homes — nonnahomes.com

OFFLINE — LICENSE SUSPENDED — CAPTURE THEIR MARKET

Stack	WordPress-based (from prior research)
Status	OFFLINE [CONFIRMED] — CSLB license suspended January 2026, site inaccessible
License	California State License Board suspension [CONFIRMED — public record]

Strategic Note

SIGNIFICANT COMPETITIVE OPPORTUNITY. Nonna was positioned as 'Sacramento's Premier ADU Builder.' Their suspension + site going offline leaves a vacuum. West Coast KBP can claim this positioning with clean CSLB standing as a trust differentiator. Create content addressing ADU contractor vetting to capture branded searches.

SECTION C

Stack Pattern Summary

Framework Distribution

Platform	Companies	Notes
WordPress (various)	SnapADU, Maxable, Nestadu, Fortune ADU	Legacy CMS — 4 of 12
Wix	GBG Construction, Redwood ADU	Weakest tier — 2 of 12
Next.js	Abodu	Only national-scale modern JS
Nuxt.js / Vue	KGA Construction	Sacramento's best local tech
Webflow	Acton ADU	Visual-first, technically limited
Custom / Unknown	LADU, Vision ADU	Both on non-WP custom builds
Offline/Broken	Fortune ADU, Nonna Homes	2 of 12 out of market

Analytics / Attribution Tier

Tier	Companies	Confirmed Signals
Full attribution	Nestadu	GA4 + GTM + HubSpot + GoHighLevel + Microsoft Clarity
Strong	KGA Construction	GTM + Meta Pixel + GoHighLevel
Standard	SnapADU, LADU, Acton ADU, Redwood ADU	GTM or GA4 + LinkedIn pixel
Minimal	Vision ADU	GA4 only — no GTM detected
Weak / Unknown	GBG Construction, Abodu, Maxable	Limited detected signals
None / Broken	Fortune ADU, Nonna Homes	Offline — not measurable

CRM / Lead Pipeline Tools Detected

Tool	Detected At	Notes
GoHighLevel	KGA Construction, Nestadu	All-in-one CRM + calendar + SMS — adopt for West Coast KBP
HubSpot	Nestadu	Marketing automation + forms — defer to v1

Calendly	Abodu (likely)	Scheduling only — GoHighLevel is stronger
Wix Forms	GBG Construction, Redwood ADU	Basic, no CRM integration
Contact Form 7	SnapADU	WordPress basic form — no pipeline
Microsoft Clarity	Nestadu only	Free session recording — adopt immediately

SECTION D

Technical Gaps in the Competitor Market

Seven confirmed gaps where no competitor has invested. Each represents a first-mover advantage for West Coast KBP.

Gap 1 No address-first intake anywhere

Every competitor uses generic 'Get a Free Quote' forms. None starts with the homeowner's address as the primary intake field. Address-first intake immediately triggers zoning lookup, signals GIS capability, and filters unqualified leads. This is the single largest product differentiation available in this market.

Gap 2 No real client portal confirmed

LADU mentions a portal but it is not confirmed from source. No competitor provides an authenticated area where clients can track permit status, upload documents, see project milestones, or communicate with their build team. This is a massive retention and trust differentiator — especially after the Nonna Homes scandal showed homeowners losing project visibility.

Gap 3 Sacramento-local city page SEO is wide open

Vision ADU does city pages in LA/OC. SnapADU does community pages in SD. Zero competitors have built a proper Sacramento/NorCal city page structure (Elk Grove, Rancho Cordova, Folsom, Sacramento, Roseville, Lincoln, Auburn). This is a first-mover opportunity — whoever builds these pages first dominates long-tail search for years.

Gap 4 Meta Pixel + Instagram attribution gap in Sacramento

KGA has it. GBG and Redwood ADU do not. Homeowners search for ADU builders on Instagram. Without a pixel, GBG and Redwood are invisible to retargeting. West Coast KBP can immediately set up a proper Facebook/Instagram attribution funnel that outclasses 2 of 3 local competitors.

Gap 5 No LLM / AI search optimization (except LADU)

LADU is the only competitor with /llms.txt, /llms-full.txt, and explicit LLM crawler permissions. As AI search (Perplexity, ChatGPT, etc.) captures more home services queries, being LLM-crawlable becomes a channel. West Coast KBP should implement this on day 1 — it costs 30 minutes to set up.

Gap 6 No interactive qualification tools in Sacramento

Vision ADU has a /quiz page. No Sacramento competitor has a zoning quiz, cost estimator, or ADU eligibility checker. These tools generate leads AND filter them — homeowners who complete a quiz are more qualified than those who fill a generic form.

Gap 7

Broken/offline competitors leaving search traffic uncaptured

Fortune ADU (DB error) and Nonna Homes (offline, suspended license) leave real search demand unfulfilled. Homeowners still search for these brands. Creating content that addresses them (e.g., 'What happened to Nonna Homes?' / 'ADU contractors in Sacramento you can trust') directly captures this traffic.

SECTION E

Recommended Architecture — West Coast KBP v0.1

Core Platform Stack

Component	Recommendation	Rationale
Framework	Next.js 14+ (App Router)	Matches Abodu. SSR + static + edge. Real routes for city pages, floor plans, blog.
Hosting	Vercel	Matches LADU. Edge network, preview deploys, analytics built-in. Zero config.
Database	Supabase (PostgreSQL)	Open-source, real-time, auth built-in. Handles leads, admin, project status.
CMS	Sanity or Contentlayer	Structured content for blog, floor plans, city pages — decoupled from code.
Auth	NextAuth.js or Clerk	Client portal login. Owner/admin dashboard. Role-based access.
Maps/GIS	Google Maps API + lot-check logic	Address autocomplete + Sacramento County parcel lookup.
Forms	React Hook Form + server actions	Native to Next.js — no plugin dependency.
Email	Resend or SendGrid	Transactional: lead confirmation, Owner notifications.
Analytics	GA4 + GTM server-side	Matches or exceeds Nestadu's setup.
Session Recording	Microsoft Clarity (free)	Heatmaps + replays. Matches Nestadu.
Ads Attribution	Meta Pixel + Google Ads via GTM	Matches KGA — Sacramento's best-attributed competitor.
CRM	GoHighLevel	Matches KGA + Nestadu. Pipeline + calendar + SMS.
SEO	next-sitemap + JSON-LD	Sitemaps + HomeAndConstructionBusiness + FAQPage schema.
LLM/AI SEO	/llms.txt + robots.txt	Copies LADU. 30 min to implement. Permanent AI search signal.

Page Architecture (v0.1 Required Routes)

Route	Purpose	Priority
/	Homepage — hero + address intake + trust signals	P0
/check-my-lot	Address-first ADU eligibility checker (GIS)	P0
/city/[city-slug]	NorCal city pages — 10 cities minimum	P0
/llms.txt	LLM crawler access file (copies LADU)	P0 — trivial
/floor-plans	Floor plan index	P1

/floor-plans/[slug]	Individual floor plan detail page	P1
/process	Build process / 8-step timeline	P1
/gallery	Project photo gallery	P1
/about	Team + CSLB license display	P1
/contact	Contact + GoHighLevel calendar embed	P1
/blog	SEO content hub	P2
/client-portal	Authenticated client area	P2
/admin	Owner review dashboard	P2
/compare/[slug]	Comparison pages (copies Vision ADU strategy)	P2

Lead Intake Flow (v0.1)

#	Action	Detail
Step 1	Address input	Google Maps autocomplete → parcel lookup → 'Your lot may qualify for an ADU'
Step 2	Basic info	Name, phone, email, timeline — minimal friction
Step 3	Lead saved	Supabase database → instant notification to Owner
Step 4	Owner review	/admin dashboard — Owner qualifies or declines each lead manually
Step 5	CRM handoff	GoHighLevel pipeline picks up qualified leads
Step 6	Follow-up	GoHighLevel SMS/email sequence initiates automatically

v0.1 constraint: No AI permit conclusions. No automatic pricing. No heavy automation. Owner sees every lead before any commitment. Manual admin review gate is a trust feature, not a limitation — it prevents the data errors and overpromising that caused Nonna Homes-type failures.

SECTION F

What NOT to Build in v0.1

Scope control is a technical advantage. Every item below represents a decision to defer complex work until v0.1 data validates the need.

Feature	Why Skip in v0.1
AI permit conclusions	Liability risk, data accuracy issues, not needed for lead gen
Automated pricing engine	ADU cost varies too much — manual quotes are better trust signals
Heavy CRM automation	Set up GoHighLevel basics — complex drip sequences after v1 data
Membership/subscription area	Not needed until 10+ active projects
Video testimonials section	Collect them first, build the section in v1
3D ADU configurator	Complex, expensive — floor plans + gallery is sufficient for v0.1
Multi-language site	Add in v1 based on lead data (Spanish likely first)
AI-powered chat widget	Simple GoHighLevel chat is fine — avoid AI chatbots that give permit advice
Deposit/payment flow	Manual qualification gate first — automated payments after trust is built
Complex analytics dashboards	GA4 + Clarity is enough for v0.1 — build dashboards from real data

SECTION G

First Implementation Slice — 8 Weeks

Build this first — it generates leads before everything else is done. Each phase is independently shippable. Phase 1 alone creates a working lead pipeline.

Weeks 1–2 Foundation — Live Lead Pipeline

- Next.js app scaffolded on Vercel — homepage live with hero + address intake form
- Google Maps API address autocomplete wired to basic form
- Supabase database — leads table with address, name, phone, email, timestamp, status
- /admin page — table showing all leads, Owner can mark reviewed/contacted
- Resend email — notify Owner on every new lead submission

Weeks 3–4 SEO Foundation — 5 City Pages Live

- 5 Sacramento-area city pages: Elk Grove, Sacramento, Folsom, Rancho Cordova, Roseville
- JSON-LD schema on every page (HomeAndConstructionBusiness + city-specific FAQ)
- /sitemap.xml auto-generated via next-sitemap
- /llms.txt — one file, 30 minutes, permanent AI search signal
- robots.txt — allow all major crawlers including GPTBot, ClaudeBot

Weeks 5–6 Attribution + CRM — Full Tracking Stack

- Meta Pixel installed via GTM (matches KGA — Sacramento's best-attributed competitor)
- Google Ads conversion tag via GTM
- Microsoft Clarity installed (free session recording + heatmaps)
- GoHighLevel pipeline — leads flow from Supabase via webhook
- GoHighLevel calendar embed on /contact page

Weeks 7–8 Content + Trust — CSLB Differentiation

- CSLB license badge + verification link on homepage and footer
- 3–5 project photos in gallery section

- Process / timeline page (8-step minimum)
- First 2 blog posts targeting Sacramento ADU keywords

Result after 8 weeks: A fully functional lead-gen site that outclasses every Sacramento competitor on stack, attribution, SEO architecture, and trust signals — with a working lead pipeline from address intake → Owner review → GoHighLevel follow-up.

SECTION H

Technical Roadmap

v0.1	Weeks 1–8	Foundation + Lead Gen	Next.js + Vercel deployed · Address-first intake → Supabase → Owner admin · 5 city pages with HomeAndConstructionBusiness + FAQPage schema · Meta Pixel + GA4 + GTM + Clarity · GoHighLevel CRM + calendar · /llms.txt + robots.txt LLM access
v0.2	Months 3–4	Content Scale	10 city pages (full NorCal coverage) · Floor plans section (5+ plans as indexed pages) · Blog content: 10 posts targeting Sacramento ADU keywords · /compare/ pages (copies Vision ADU positioning strategy) · FAQ schema expansion
v0.3	Months 5–6	Interactive Tools	ADU cost estimator (range-based — avoids liability) · ADU eligibility quiz (matching Vision ADU's /quiz) · Enhanced address checker with Sacramento County parcel data
v1.0	Month 8+	Client Portal	Authenticated client login (NextAuth.js / Clerk) · Project milestone tracking dashboard · Document upload (permits, plans, photos) · Messaging thread per project · Mobile-first PWA experience
v1.5	Month 12+	Automation + Scale	GoHighLevel automation sequences (SMS day 1, 3, 7 follow-up) · Automated lead scoring based on parcel size + zone · Multiple language support (Spanish priority for Sacramento demographics)

SECTION I

Sources and Evidence

All technical signals gathered via direct HTTP inspection, HTML source analysis, and public records. No third-party paid tools were used. No stack details were invented — all facts are directly confirmed or explicitly labeled as inferred.

#	Source	URL	Evidence
1	Abodu	https://www.abodu.com	HTTP headers + source: __NEXT_DATA__, maps.googleapis, LinkedIn pixel, sitemap
2	LADU	https://www.ladu.co	Headers: server Vercel, x-vercel-cache; source: GTM-TRWJ2MBC, LinkedIn; robots.txt LLM access; sitemap
3	LADU llms.txt	https://ladu.co/llms.txt	LLM crawler access file — confirmed present
4	SnapADU	https://www.snapadu.com	Source: WordPress/Divi plugins, GTM-K86RPXK, nginx headers, 10-sitemap index
5	Vision ADU	https://visionadu.com	Source: GA4 G-EXY4F68N0Z, HomeAndConstructionBusiness + FAQPage schema, GPTBot allowance, multi-sitemap
6	Acton ADU	https://www.actonadu.com	Source: Webflow; headers: cf-ray Cloudflare; GTM-WP35BHV, LinkedIn
7	Maxable	https://www.maxablespace.com	Source: WordPress, Cloudflare cf-ray, gtm-server string
8	GBG Construction	https://www.gbgconstructioninc.com	Headers: server Pepyaka (Wix), wixstatic.com preconnect, x-wix-request-id, Fastly CDN, AdsBot-Google robots.txt
9	KGA Construction	https://kgaconstruction.net	Source: nuxt/vue keywords, GTM-T9W9XC2D, fbq Meta Pixel, GoHighLevel, Cloudflare
10	Redwood ADU	https://www.redwoodadu.com	Headers: Pepyaka (Wix), wixstatic.com, Fastly; source: GA4 G-GZ2KC5PZ9Q, LinkedIn
11	Nestadu	https://nestadu.com	Source: WordPress/Elementor, server WPX CLOUD/NY01, GA4, GTM, Microsoft Clarity, HubSpot hbspt.forms, GoHighLevel
12	Fortune ADU	https://www.fortuneadu.com	HTTP response: Apache + WordPress + database connection error on all URLs
13	Nonna Homes	https://www.nonnahomes.com	CSLB license suspension January 2026 (public record); site inaccessible
14	Vision ADU sitemap	https://visionadu.com/sitemap-index.xml	Multiple sitemaps: /sd/sitemap.xml, /homes/sitemap.xml — /quiz, /compare/ pages confirmed
15	SnapADU sitemap	https://www.snapadu.com/sitemap_index.xml	10-sitemap index: floor_plans-sitemap, projects-sitemap, testimonials-sitemap

Prepared by Perplexity Computer for West Coast KBP (westcoastkbp.com) — Elk Grove, California · June 2026 · Confidential
